

VBCI Youth Data Analytics Report

Prepared by: Divine Ackun

NOTE: This dashboard entails more insight than it seems.

Executive Summary

This report presents findings from the youth data analytics project for the Victory Bible Church International (VBCI). Data was manually collected from 23 youth members through paper surveys. The analysis was conducted using Microsoft Excel and visualized with Power BI and Power Query. Key insights include high smartphone usage, majority presence of youth within a certain age range, and strong male representation and departmental involvement. These findings can guide youth engagement strategies and digital outreach initiatives.

1. Introduction

In an effort to better understand and engage the youth of VBCI, this data collection initiative was launched. Gathering accurate information about our members will help tailor programs, improve communication, and increase participation.

2. Methodology

Data Collection Method: Physical paper forms handed out to members after church service. Each member provided information including age, location, phone ownership, gender, social media use, departmental involvement etc...

Data Processing Tool: Microsoft Excel

Data Visualization Tools: Power BI and Power Query

Sample Size: 23 Youth Members

Note: Sample size includes only members that were present in church at the time of collection. However, absentees include some BECE Candidates that were camped by their Junior High Schools and a few that were not able to make it to church for unknown reasons.

3. Key Findings

- **Phone Ownership:** 15 of 23 own phones (14 smartphones, 1 keypad).
- **Gender Distribution:** 13 males, 10 females.
- **Age Range:** Majority are within the ranges of 14 – 16 years, constituting 12 in number.
- **Residential Areas:** 14 live in Kokomlemle whereas the rest spread across 8 other locations.
- **Departmental Involvement:** Majority in the number of 13 are involved in departmental activities whiles 10 are not.
- **Parents in Church:** 16 have parents in church.
- **Social Media Use:** 18 are active users. Prevailing platforms amongst them include WhatsApp, Snapchat and Tiktok.
- **Home Cell:** None of the members attend home cells.

4. Analysis & Interpretation

The insight gives an indication in the following areas:

- **Youth Engagement:** That smartphones and social media can be leveraged for communication and outreach purposes.

- **Department Participation:** Non-departmental members can be encouraged to get involved.
- **Location:** Majority of members can easily access church when there are programs of interest.
- **Parental Involvement:** Special care for youth without church-involved parents.

5. Recommendations

Kindly note that, at this point recommendations can only be made if the analyst understands stakeholder's areas of interest.

6. Conclusion

The project has provided valuable insight into youth demographics and engagement. Ongoing data collection and strategic programs based on data will strengthen youth ministry impact.
